

HOME REPAIR & REMODELING

*Paints, solvents, adhesives, dusts, sediments, pesticides, and household toxics commonly associated with home repair and remodeling activities often make their way into the **City of Morgan's Point Resort** storm water system and **DO NOT GET TREATED** before reaching **Lake Belton**. These wastes make our waters unhealthy and unsafe for people and wildlife.*

Follow these practices to help prevent storm water pollution...

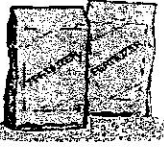

Household Hazardous Wastes...

Common household cleaners, paint products, and wallpaper & tile adhesives contain toxic substances. Dispose of these products properly. **REMEMBER:** Toxic wastes should never enter the storm water system. For disposal information, call your paint distributor.

Construction...

Keep all construction debris away from the street, gutter and storm water system, and if possible, schedule grading and excavation projects for dry weather. Cover excavated material and stockpiles of asphalt, sand, etc. with plastic tarps, and prevent erosion by planting fast-growing annual and perennial grasses, which will shield and bind the soil.

Landscape & Gardening...

 Use fertilizers and pesticides as directed. Keep them away from ditches, gutters and storm water systems, and store them in a covered area to prevent contact with rain water. Also, minimize runoff and conserve water by using drip irrigation, soaker hoses, or micro-spray systems. **REMEMBER:** Do not deposit leaves into the street, gutter, or storm water system.

Painting...

CLEANUP... Avoid cleaning brushes or rinsing paint containers into a street, gutter, or storm water system. For water-based paints, "brush out" as much paint as possible, and rinse in the sink. For oilbased paints, "brush out" as much paint as possible, clean with thinner, and then filter and reuse thinner or solvent.

REMOVAL... Paint stripping residue, chips & dust from marine paints, and paints containing lead or tributyl tin are hazardous wastes. Sweep them up and call your paint distributor for disposal information.

RECYCLING... Recycle or reuse leftover paint by using it for touch-ups, or by giving it to someone who can use it, such as a theatre group, school, city or other community organization. You can let the paint dry out and dispose during quarterly clean up or the 2nd trash pick-up day. If you're unable to give it away, contact your local paint distributor.

Concrete & Masonry...

Store bags of cement and plaster away from gutters and storm water systems, and under cover, protected from rainfall, runoff and wind. **REMEMBER:** Never dispose of cement washout or concrete dust onto driveways, streets, gutters or storm water systems.

For more information, call City Hall at 254/780-1334
